१. Duration

For FY 2024 to 2025 and can be Extended on the services found to be satisfactory until terminated by either party (agreement to be reviewed on 15 Th March of every year till 3 years or till the bank if found to be duly/statutorily valid by the competent licensing agency)

२. Service Objectives

The objective of this Agreement is to secure for Hospital the provision of blood components and related services to a level that satisfies the requirements of the Blood Safety and Quality Regulations policy India and various legal laws pertaining to the same.

३. Services to be covered

The main elements of the services to be covered by this agreement are

Provision of blood components for emergency stock Provision of compatible red cells for named patients

- Provision of blood components for emergency stock.
- Provision of compatible cells for named patients.
- Provision of blood components for storage as required.

The supplying Blood bank will supply blood and blood components (and related services) in compliance with the Blood Safety and Quality Regulations policy-India and various legal laws pertaining to the same & as amended from time to time.

4. Quality Management Specification

The Blood bank undertakes to ensure that all blood components supplied will be accompanied by appropriate documentation and will be transported in a validated manner which ensures that the supplied components remain within specification throughout the transport period and until they are transferred to controlled temperature storage.

The supplying and receiving hospitals will adhere to the quality system for hospital blood banks as required by the Blood Safety and Quality Regulations policy-India and various legal laws pertaining to the same.

There are standard operating procedures for the storage, distribution and transport of blood and blood components within the supplying and receiving Hospitals.

- Blood components will be issued and transported in accordance with the Regional/National Transfer Policy.
- A fully documented procedure exists covering responsibilities and actions to be taken by each hospital in the event of a recall of blood components.
- "Cold chain" procedures, supported by documentary evidence, ensure specified temperatures and storage conditions are satisfactorily maintained at all times. Unused blood will only be accepted on return to the supplier if there is documented evidence that the cold chain procedure and the Regional/National Transfer Policy have been strictly adhered to
- There are standard operating procedures for the reporting of serious adverse events and reactions relating to the transfusion of blood components within the supplying and receiving Hospitals
- Appropriate and regularly updated training to staff in all of the above activities should arrange and appropriate records of this training are kept.

5. Traceability

It is essential that there is complete traceability for all units transferred.

Full records will be maintained of the distribution of all components from the Blood Bank to the receiving hospital and there will be a documented process in place to confirm the member of staff who received the supplied components and when they were received.

The originating hospital will be responsible for full final traceability of units transferred to Hospital. At the time of transfer the originating hospital will record that the units have been transferred

For blood components that have been transfused, hospital will be responsible for recording the final fate of the units in the patient's notes and transferring the information back to the originating hospital/Blood Bank For final documentation.

For blood components that have not been transfused, hospital will be responsible for recording the final fate of the components, including the reason they were not used and transferring the information back to the originating hospital for final by the Blood Bank. Irrespective of whether the blood was transfused or discarded, the receiving hospital must return the traceability document /label to the originating hospital.

If the transferred units bypass the receiving laboratory, e.g. In an emergency situation, then both hospitals should work together to ascertain the final fate of the units.

6. Mandatory Haemo vigilance Reporting

There are standard operating procedures for the notification of serious adverse events and reactions that satisfy the requirements of the Blood Safety and Quality Regulations at both Supplying and Receiving hospitals and these are supported by appropriate training records.

All Serious Adverse Reactions and Serious Adverse Events will be notified by the recipient hospital to the blood bank manager (or nominated deputy) at the supplying Blood bank immediately. These will be investigated by both parties and the necessary reports made by the blood bank will be submitted to the hospital ASAP.

Adverse reactions/ events which could have been due to faulty components must also be reported as soon as possible
